

Data Conversions

Data Conversions are not all the same, EHR Integration Services' proven methodology minimizes costs and ensures data integrity.

By the Numbers:

Successfully completed more than 400 large and small data extraction and conversion projects

14 years experience with more than (14) leading EHR/PM vendors

35 years experience extracting more than (35) data modules

Summary

MEDENT[®] has partnered with EHR Integration Services to offer a streamlined, low cost conversion solution for moving your EHR System's clinical data into your new MEDENT[®] System. To ensure a successful conversion, EHR Integration Services, MEDENT[®] and Customer acknowledge and agree to the responsibilities below:

EHR Integration Services (EHRis[™]) Responsibilities

1. Provide the extraction services of the data from Customer's EHR System.
2. Transform the data into the needed formats expected by MEDENT[®], specifically the C32 & C62 formats.
3. Exact data sets will be determined based on the Customer EHR System. Possible data sets that may be included are:

Patient Demographics	Medications
Allergies	Immunizations
Vitals	Results
Problems/Diagnoses	Procedures
Scanned Images	Office Notes/Documents
Histories (Family, Medical, Social, Surgical)	

4. EHRis[™] will not alter the data in any way, other than ensuring it is presented to the MEDENT[®] EHR System based on the healthcare standards agreed to (C32/C62 format).
5. Generate a Code Mapping Workbook.
6. Schedule and lead weekly status calls for the duration of the conversion project.
7. Extract twice, once for test and once for production processing.
8. No Gap Conversions will be provided. If needed, these small gap conversions will be scoped and contracted separately.
9. Provide Error Resolution in production for two business weeks after go live date. Additional support hours can be provided after this time period and will be billed on an hourly basis as needed, or may be contracted for separately in advance.

MEDENT[™] Responsibilities

1. Facilitate the implementation of their new software.
2. Assist with conversion questions that may be raised by Customer.
3. Participate in the weekly conversion status calls.
4. Assist with the validation of the data in the new MEDENT[®] System.
5. Load the data into Customer's newly installed MEDENT[®] System.

Customer Responsibilities

1. Provide access to a server as listed below for the duration of the project. This server will be used by EHRis[™] to perform all necessary conversion work.
2. Install remote access software (LogMeIn) on Customer's Conversion Server to allow for EHRis[™] remote access.
- 3. Complete the Code Mapping Workbook.**
4. Assist with communicating with their current EHR Vendor, as may be needed by EHRis[™].
5. Participate in the weekly conversion status calls.
6. Validate and approve the data that is converted into the new MEDENT[®] System.
7. Provide formal approval/sign-off of the testing phase prior to extraction of production data.

Conversion Server Requirements

The Staging/Conversion Server required for this project can be an actual physical server or a virtual server (recommended so that additional resources can be added). As part of the project kickoff, EHRis™ will review and/or assist the Customer with any questions on obtaining this server by either repurposing an existing machine or presenting other alternatives that are available. The minimum specifications for this server are as follows:

Server Attribute	Min Requirement
Type	Physical or Virtual
Disk space	40 GB (Will vary based on quantity of data)
Processors	2 CPUs Minimum, 4 CPUs Preferred
Memory	16 GB
Needed software	IIS – Webserver SQL Server 2008 or above Microsoft Word .NET Framework 4.0
Speed of the Drive	9600 RPM Drive
Operating system	Microsoft Standard Server 2008 or higher

MEDENT™ Partner Conversion Cost: \$9,750

When you work with EHR Integration Services, you'll find that we're not just another tech shop that connects clinical, financial and administrative systems. Our value goes far beyond our extensive technical expertise. Our experts apply their knowledge and experience to improve patient care, reduce wasted time and increase your profitability.

Consulting

Perfect Practice Consulting is the journey that will improve your practice through careful workflow analysis, strategic planning, effective implementation and annual reviews. We focus on efficiency to reduce workflow fatigue among physicians and staff.

Productivity Applications

In a hectic practice environment, it's not uncommon to find inefficient processes that don't deliver the required outcome. Our productivity applications are driven by real world feedback to improve practice efficiency and patient care.

Support

Our Perfect Practice commitment is also reflected in the way we deliver support. No matter what your need, we've got your back with short or long-term support staffing, interface specific or application-wide help, hourly or annual maintenance agreements.

Additional Conversion Services

All services listed below are additional services that are offered by EHRis™ at an additional charge. Customer may choose, at its discretion, whether these services will be utilized. Upon request, services will be evaluated and quoted by EHRis™.

- Inclusion of additional data that is not listed above. Examples of data that would fit this criteria are:
 - + Patient Phone Note information which is not part of the actual chart in the EHR system.
 - + Task Information
 - + Audit Trail Information
- Consolidation of individual notes or documents into a single PDF, to be included in the MEDENT® EHR.
- Consolidation and/or manipulation of scanned images prior to presenting the data to MEDENT® for processing.
- Completion of Code Mapping Workbook
 - + EHRis™ will perform the mapping of coded data from source system values to target system values, instead of Customer performing this task.
 - + Customer will still be responsible for final validation of all mapped values, with written approval before the values are utilized in the data transformation step.

Interface Development

Our core competency is interface development, and we look for ways to optimize workflow, create operational efficiencies, reduce tedious tasks and provide the critical information you need when and where you need it.

Data Conversions

So you've decided to make the BIG SWITCH. We have been through this hundreds of times and will remove the pain and anxiety for you. There's even a good chance that we have your system in our Data Conversion Library.
