Instantly output patient records individually or as a batch with Chart2PDF.

Chart2PDF

Chart2PDF is an efficient application designed to save healthcare practitioners time, money, and resources on exporting patient records. It seamlessly exports single or multiple patient charts to a PDF file and is fully integrated with Allscripts TouchWorks™. The primary function of Chart2PDF is to automate the time-consuming task of converting a patient chart into a single PDF for printing, storage, or electronic transfer. These files can be used for insurance and legal audits, physician and patient transfers, and Meaningful Use Compliance.

> **Efficiency:** Chart2PDF has two useful workflow options available; On Demand and Batch Automation. The first allows you to create, personalize, and export a single patient chart instantly. The second allows you to select, personalize, and export multiple patient records immediately or at a later scheduled time.

> **Productivity:** Free up your staff with Chart2PDF. End preoccupation with time-consuming tasks such as printing, scanning, and creating one patient chart at a time. This application allows you to end inefficient use of staff resources on tedious administrative tasks.

> **Cost-effectiveness:** Reduce your material and labor costs associated with creating, storing, and exporting patient records. Chart2PDF is all digital and does not require significant physical resources in order to function effectively.
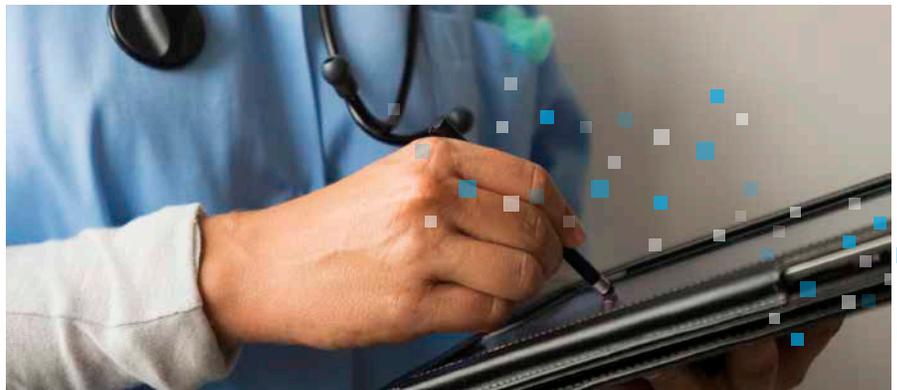

> **Personalization:** Patient charts can be personalized with photos and other identifiers. This allows practices to easily identify and organize patient records while adding a much-needed human touch to patient care.

> **Security and Risk Mitigation:** Chart2PDF protects sensitive patient information. All exported charts are password protected for security. Additionally, there are several reporting features available including data on application use and an audit of all extracted charts categorized by disclosure reason. You can also quickly respond to legal and insurance audits with Chart2PDF.

Allscripts™ | **Developer Program**
Certified Application

Chart2PDF Features:

> Customized configuration of patient charts

> Customized cover page including practice's logo and address

> Chart personalization features such as patient photo and identifiers

> Single sign-on with Allscripts TouchWorks EHR

> Extensive patient searching options

> Global Document Filters

> Pay only for what you use with our new pay-by-chart pricing model

> Ability to save a document back to the patient's chart

Chart2PDF

Query for a single patient record or create a batch report with multiple patient charts.

Customize the output of your chart through advanced filtering.

Preview your documents before outputting to PDF.

New Features for Chart2PDF:

Fully Supported Stand Alone Mode:
This mode allows users to open Chart2PDF and extract patient records without being logged into Allscripts TouchWorks™. The login window prompts users to enter their TouchWorks credentials for authentification purposes.

Extended Patient Searching
More patient searching options are available including; MRN, Full or Partial Last Name, First Name and Birthday. Additionally, two or more patients are returned in the new search, those patients can be added to the extract.

Save a Document Back to a Patient's Chart
This feature enables users to see when an extract has been completed.

Global Document Filters
These filters now appear in the User Interface. They default as unchecked in the document or results lists, but the user can easily check the ones that are to be included in the extracted chart.

Chart2PDF In Practice:
"When a long-standing Cardiologist left our practice, we needed a way to manage his complex patient charts to go with him. Chart2PDF allowed us to quickly select and manage a large group of patients and batch produce charts without a performance impact. The product has been a remarkable time and money saving investment for our practice!"
