

EHR Integration Services and EagleDream Health Launch Integrated Population Health and Point of Care Solution

EHR Integration Services (EHRis), a leading healthcare data management service company, and EagleDream Health, a Rochester, New York-based healthcare analytics and population health management software company, have teamed up to offer QIS Inform, a healthcare analytics solution designed to integrate population health and point of care patient data directly into an Electronic Health Record (EHR).

[EHR Integration Services](#) (EHRis), a leading healthcare data management service company, and [EagleDream Health](#), a Rochester, New York-based healthcare analytics and population health management software company, have teamed up to offer [QIS Inform](#), a healthcare analytics solution designed to integrate population health and point of care patient data directly into an Electronic Health Record (EHR).

QIS Inform leverages the data from EHRis' proven point-of-care quality management application with a powerhouse of healthcare analytics and population health data from EagleDream Health's Inform software to create a unique and highly effective performance management solution. As healthcare transitions from a volume to a value-based model, QIS Inform provides the insight, actionable data, risk stratification and proactive care management tools needed to address daily clinical practice challenges. Utilizing powerful predictive algorithms, it allows healthcare providers to effectively identify and manage high-risk patients to improve the overall quality and financial performance of their practice.

“With this solution, quality information measures are directly integrated into a clinical practice EHR to support daily workflow,” explained Craig Luce, President of EHRis, “It uses a traffic light icon directly in the patient chart to identify gaps in patient care in which red, orange, yellow and green symbols alert care teams to take timely and appropriate action. This functionality gives physician practices clear visibility to baseline quality-of-care metrics and allows them to take the appropriate clinical action if necessary.”

“We're excited to expand our partnership with EHRis and offer physician practices innovative tools to enhance the quality of care they provide,” added Dr. Betty Rabinowitz, President and CEO of EagleDream Health. “Identifying high-risk patients that may impact quality and financial performance is essential to the success of a practice. QIS Inform lets practices seamlessly drill-down to important demographics, geospatial mapping, care gaps and morbidity hot spots.”

EHRis will be hosting a Webinar to introduce the new product on Tuesday, October 25 at 1:00 p.m. EDT. The Webinar will provide a demonstration of QIS Inform, as presented by Dr. Rabinowitz, and show how it compares performance on quality metrics among organizations, practices and individual physicians over time and across multiple metrics and parameters. Those interested in the Webinar can [register](#) for it online.

About EagleDream Health, Inc.

EagleDream Health, Inc., is a healthcare software analytics solutions company that delivers a SaaS-based, comprehensive, integrated solution that spans the entire clinical, financial and administrative spectrum. With its sophisticated analytic tools for managing value based care, its modular, tailored software enables organizations to achieve more successful population health management through increased quality of care to patients, reduced costs and greater patient access and engagement. EagleDream Health is headquartered in Rochester, NY. For
