

Workflow vs. Work Slow

IntelFiler automates filing of patient records resulting in improved accuracy and operational efficiency.

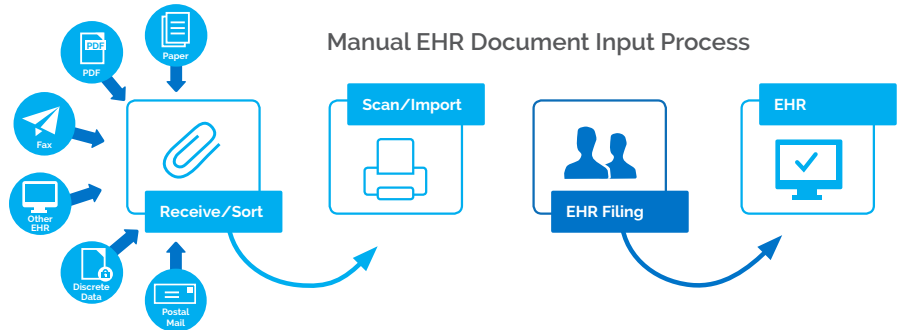

API Integration Coming Soon!

Features and Benefits

- > Maximum 24 hour turnaround
- > 95% manual filing reduction
- > Reduced filing errors and operational costs
- > HIPAA compliant
- > Consistent filing results
- > 99.99% reported accuracy rate
- > Automate filing of faxes, scanned paper documents, PDFs and more
- > Link documents to existing orders in NextGen Enterprise EHR
- > Improve patient satisfaction with reduced wait times and better provider attention
- > Free up employees for more productive activities

Unfiled patient documents are a common challenge that all healthcare providers have, with up to 1 million pages of unfiled documents for every 100 providers annually. IntelFiler leverages advanced technology, combining intelligent document management and workflow automation, that indexes and places documents directly into your patient's health record. The application standardizes and automates the file to chart filing workflow process resulting in greater accuracy and efficiency while decreasing staff resources devoted to manually filing and entering data into NextGen Enterprise EHR.

> Automatically Capture and Manage Fax and Digital Documents:

IntelFiler incorporates SmartFiler™ analysis technology to your front end workflow. SmartFiler's automated indexing looks at headers, keywords, logos, data, lines and grids as it reads and analyzes scanned documents, faxes and PDFs. When SmartFiler identifies key data such as patient, document type, date of service and provider, it places that information into a folder for IntelFiler, so workflow rules can be applied and the document can be processed into NextGen Enterprise EHR.
