

# EHRis Conversion and Archiving Solutions

## A better way to Convert, Archive and Manage Patient Data

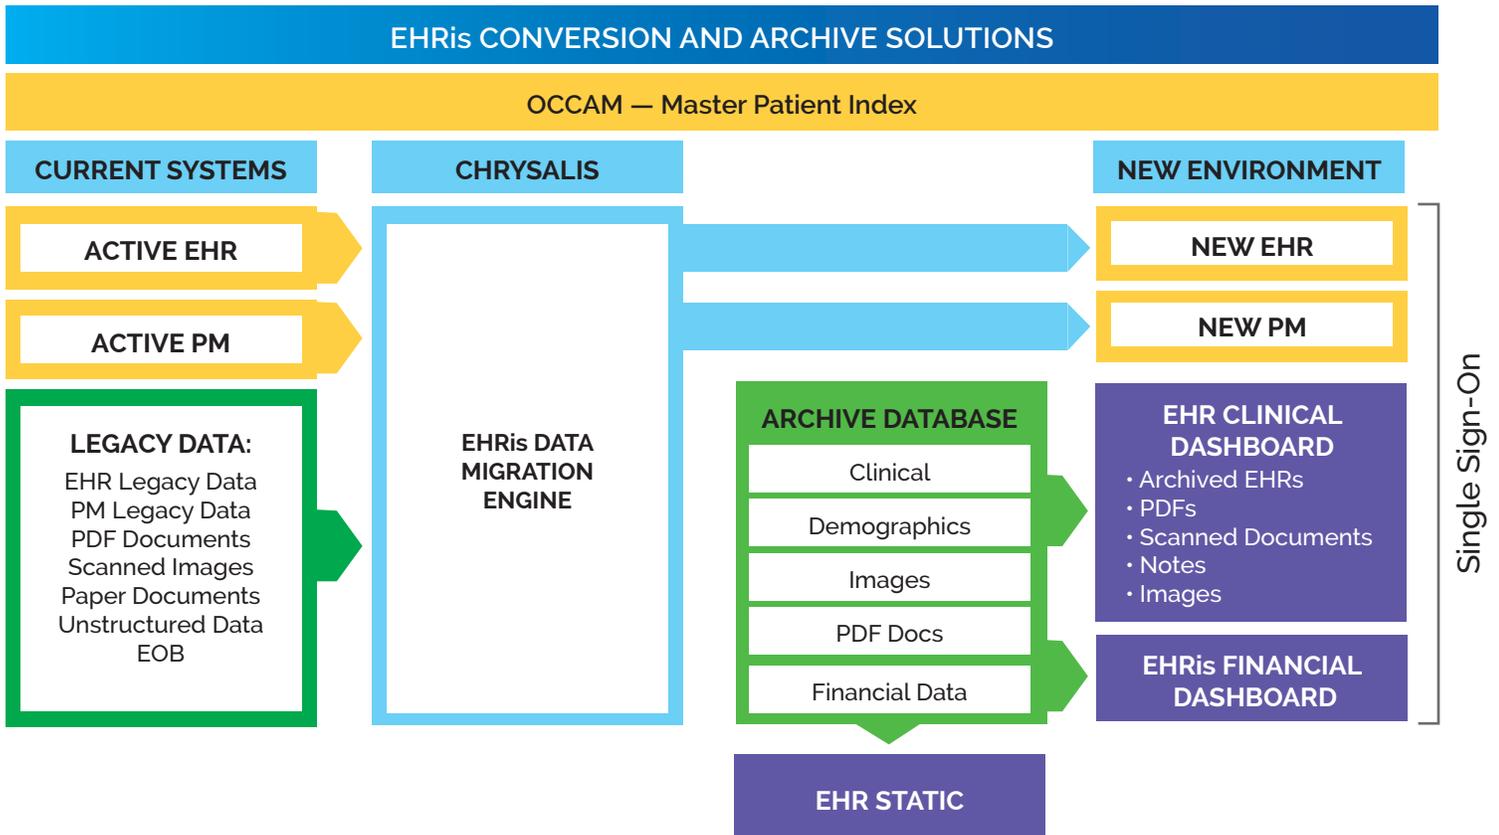

Our conversion solutions team works with all of your existing patient data to convert, migrate, and then provide easy access to live and archived patient information. We leverage advanced technology, maintain strong relationships with leading EHR/PM vendors, and utilize our extensive Conversion Library to get your new systems online quickly and with minimal expense.

This one-stop solution will solve duplicate patient records, convert your EHR/PM to a clean new system, and archive all legacy patient data into a master archive database that is easily accessed and viewed in our customizable dashboard.

- Comprehensive Conversion Library
- Duplicate Patient Records Management
- Clinical and Financial Archive Data Storage
- Integrated Dashboard to Access Archived Data
- Release of Records Utility

### SOLUTIONS FOR:

- Practices
- Ambulatory Clinics
- HIE Networks
- Hospitals and Health Systems

# See all of Your Current and Legacy Clinical Data in One Place

## Eliminate Duplicate Patient Records Before Conversion

Problems associated with duplicate patient records is an on-going challenge, especially during conversions. Prior to your data migration, we work with our strategic partner, OCCAM, to quickly assess how big your duplication count problem actually is for your organization. Then we employ OCCAM's sophisticated merge patient cleanup process. And, since the duplicate patient challenge never goes away, OCCAM may also serve as your on-going duplicate patient management solution.

## EHR Conversions—Optimize The Value of Your New System

The gold standard for EHR system replacement is to populate a new system with as much patient information as possible from the system or systems it is replacing. EHR Integration Services is an industry leader in performing thorough and efficient data conversions. We work closely with the key stakeholders in your organization to make sure your EHR conversion and data migration project is a success, so you can focus on continuing to deliver excellent patient care with a minimum of disruption.

## Clinical Archive Dashboard—provide access to ALL Patient Records

It may not be practical or possible to convert all the relevant clinical data from your old system into your new EHR. Yet it's crucial for patient care and for medical/legal reasons that you "leave no data behind." The EHR Clinical Archive Dashboard provides easy access to a full view of all archive data from your old EMR. There's no need to keep your old system running, along with the maintenance and licensing headaches that go with it. The EHR Clinical Archive Dashboard can be configured to operate as a module inside many leading EHR systems, avoiding the need for clinicians to log into multiple systems to see their patient's information.

## Access, Process, and Release Patient Records Easily—EHR Static

EHR Static provides a convenient repository of archived clinical documents from any source including legacy EMRs, images, scanned documents, notes etc. Stored as PDFs, they are fully searchable by description, type, date range, provider and more. An excellent way to archive an EHR without the expense, or for easy patient record processing and patient record release.
