

# Direct Patient Scheduling Application

Direct Patient Scheduling is a Perfect Practice solution targeting patient and provider engagement. Most providers want their patients to have the ability to schedule appointments online and offer more strategic ways to communicate. Direct patient scheduling increases patient engagement, frees up staff time and creates a more efficient practice.

## Features

- > Providers can quickly check a patient's chart from their smart device
- > Powered by FHIR OPS Healthcare Data Standard
- > Patients can make appointments at their convenience, 24/7, from anywhere
- > Reduces the volume of and time spent managing paperwork and forms
- > Efficiently manage chronic care while helping advance value-based care

## Benefits

- > Platform Agnostic
- > Reduce Volume of Paperwork and Forms
- > HIPAA/HITECH Compliant
- > Efficient Management of Chronic Care Patients
- > Cost-Effective
- > Advances Value-Based Care Initiatives
- > Scalable Patient Engagement and Outreach Capabilities

## Existing Patient Engagement Solutions Are Limited

InteleFiler incorporates SmartFiler™ analysis technology to your front end workflow. SmartFiler's automated indexing looks at headers, keywords, logos, data, lines and grids as it reads and analyzes scanned documents, faxes and PDFs. When SmartFiler identifies key data such as patient, document type, date of service and provider, it places that information into a folder for InteleFiler, so workflow rules can be applied and the document can be processed into the EHR.

## Patient Scheduling and Engagement Made Easy

Direct Patient Scheduling makes online scheduling a reality. It is built on a fully-integrated platform powered by FHIR OPS, the future of healthcare data standards. FHIR removes the technical barriers to including more patient data in clinical systems. Patients and providers have unprecedented, round the clock access to their medical data. Instant access to data keeps patients and providers alike engaged in the care decision-making process, giving people more information and control over their care.

This solution is platform agnostic and can be integrated into just about any EHR or PM system. Patients and providers alike have easy access to the application from a smart device, enabling convenient 24/7 patient scheduling and effective patient management on the provider side. As a result, your practice will see improved interoperability, enhanced patient engagement, and a streamlined decision-making process.
