

# EHRis Conversion and Archiving Solutions

## A better way to Convert, Archive and Manage Patient Data

Our conversion solutions team works with all of your existing patient data to convert, migrate, and then provide easy access to current and archived patient information. We leverage advanced technology, maintain strong relationships with leading EHR/PM vendors, and utilize our extensive conversion library to get your new systems online quickly and with minimal expense.

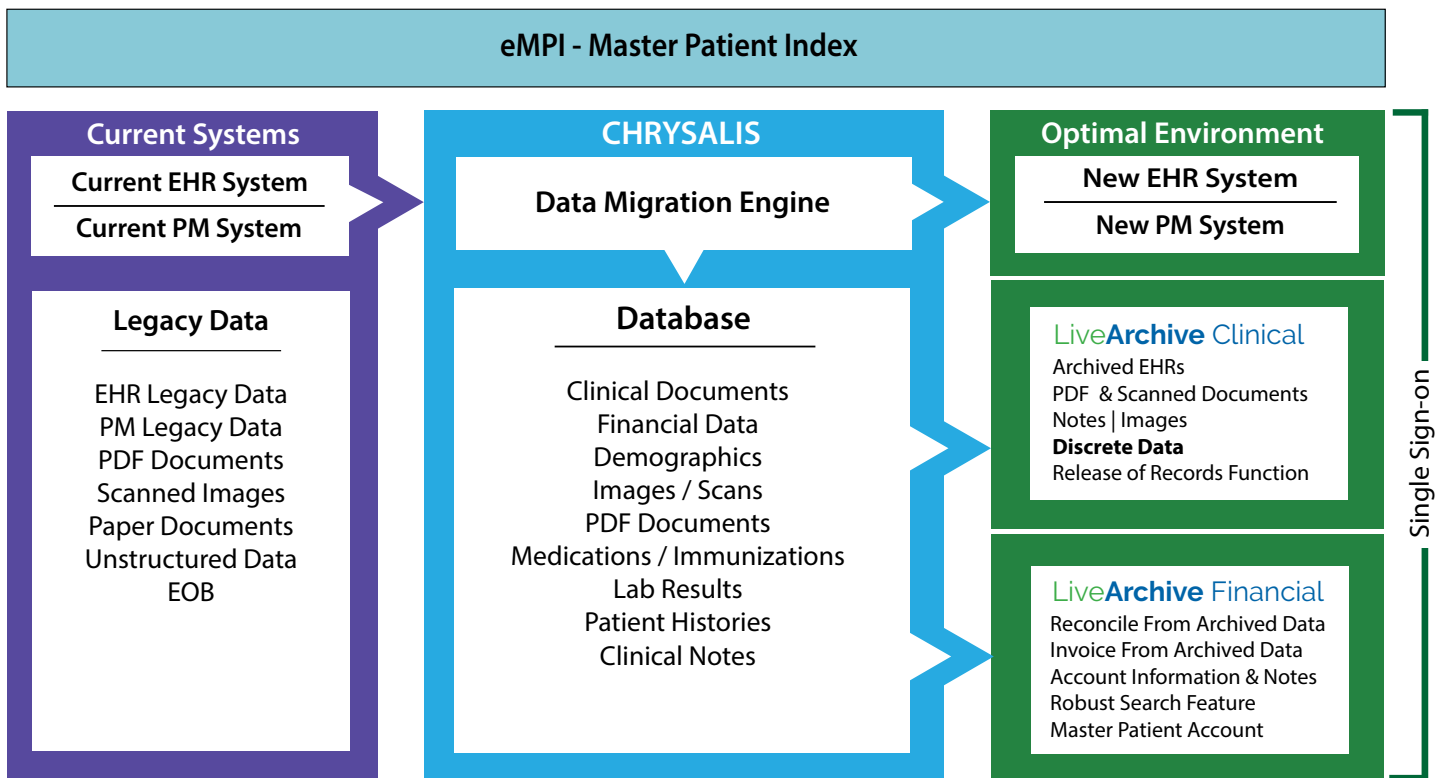

This one-stop solution will solve duplicate patient records, convert your EHR/PM to a clean new system, and archive all legacy clinical and financial data into a master archive database that is easily accessed and viewed in customizable dashboards.

- Comprehensive Conversion Library
- Duplicate Patient Records Management
- Clinical and Financial Archive Data Storage
- Integrated Dashboard to Access Archived Data
- Release of Records Utility

### SOLUTIONS FOR:

- Practices
- Ambulatory Clinics
- HIE Networks
- Hospitals and Health Systems

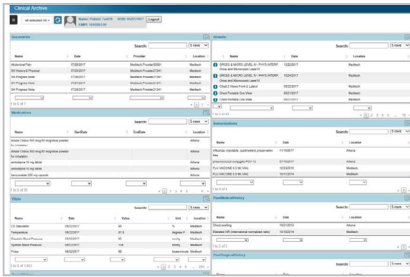

## EHRis CONVERSION AND ARCHIVE SOLUTIONS

# See all of Your Current and Legacy Clinical Data in One Place

## LiveArchive

### Eliminate Duplicate Patient Records Before Conversion

Problems associated with duplicate patient records is an on-going challenge, especially during conversions. Prior to your data migration, we work with our strategic partner, OCCAM, to quickly assess how big your duplication count problem actually is for your organization. Then we employ a sophisticated merge patient cleanup process. And, since the duplicate patient challenge never goes away we can serve as your on-going duplicate patient management solution.

### EHR Conversions—Optimize The Value of Your New System

The gold standard for EHR system replacement is to populate a new system with as much patient information as possible from the system or systems it is replacing. EHR Integration Services is an industry leader in performing thorough and efficient data conversions. We work closely with the key stakeholders in your organization to make sure your EHR conversion and data migration project is a success, so you can focus on continuing to deliver excellent patient care with a minimum of disruption.

### LiveArchive-Provides Access to ALL Archived Healthcare Records

LiveArchive is an integrated suite of healthcare archival applications. Providers and staff use LiveArchive to access and interact with legacy clinical and financial information through interactive dashboards. Users are able to search, filter, organize, compile, output and interact with all archived patient information (including discrete data). This comprehensive archival solution aggregates all data into one centralized location, keeping your practice in compliance while improving your organization's interoperability and workflow.

**LiveArchive** is like having a mini EHR or PM attached to your archive data, without the licensing, hassle or expense of maintaining your old system.

**LiveArchive Clinical** - Archive clinical data from one or multiple Electronic Health Record systems into a single data warehouse. The LiveArchive database provides storage, display, and reporting capabilities for discrete data such as population health, meaningful use, compliance and MSSP reporting. Easily search and retrieve archived documents for reference, compliance and release of records.

**LiveArchive Financial** - Move your legacy financial data to LiveArchive and continue invoicing and managing collections from your financial archive.
